

## **CCASS**

CCASS was developed in 1986, as a tool used in the process of determination of responsibility for Construction contracts on sealed bid solicitations. CCASS was later mandated for use by all DoD agencies in the Defense Federal Acquisition Regulation Supplement (DFARS) subpart 236.2. The DFARS implements the regulations within the Federal Acquisition Regulation (FAR).

The primary purpose of CCASS is to collect Construction performance evaluations for use in source selections through the Past Performance Information Retrieval System (PPIRS). CCASS information also includes limited DoD Contract Award information. Performance evaluations are retained in the CCASS system for six years from the date signed by the Rating/Evaluated by Official.
